

In the Abstract:

Please add new Abstract of the Disclosure, on following page.

ABSTRACT OF THE DISCLOSURE

2 A rail and supported panel assembly having first and second rail portions, each
portion having a constant cross section defining an elongate recessed channel on an
underside. Also included are a panel supported at a top edge, a post for supporting the
4 rail portions, and a rail-to-post connection assembly located between the post and the
rails. The connection assembly has a pair of partially overlapping arms movable with
6 respect to each other about a pivot to accommodate a range of first and second rail
portion alignment angles.
